

# STUDENT REPORT

## DETAILS

### Name

SHREYAS PAUL

### Roll Number

3BR23CD090

## EXPERIMENT

### Title

#### ENCODE THE NUMBER

### Description

You work in the message encoding department of a national security agency. Every message that is sent from or received in your office is encoded. You have an integer N, and each digit of N is squared and the squares are concatenated together to encode the original number. Your task is to find and return an integer value representing the encoded value of the number.

**input1:** An integer value N representing the number to be encoded.

#### Output :

Return an integer value representing the encoded value of the number.

Sample Input:

167

Sample Output:

13649

### Source Code:

```
n=int(input())

res=0

f=1
while n>0:
    rem=n%10
    sq=rem**2
    if sq<10:
        res=sq*f+res
        f*=10
    else:
        res+=sq*f
        f*=100
    n//=10
print(res)
```

## RESULT

5 / 5 Test Cases Passed | 100 %
